

Barth Syndrome Interview Project

Are you a TAZPOWER trial **patient** or **caregiver**?

Participate in a research interview from your home!

The company developing the Barth syndrome (BTHS) treatment injections (Stealth BioTherapeutics) would like to make sure they understand patient and caregiver/observer perspectives on any changes patients experienced on treatment that are meaningful to patients and their caregivers/observers.

To capture this information, they are sponsoring an interview project. The interview will take around 60 minutes to complete and can be conducted from wherever you are using a smartphone app. Study participants will select an interview partner (spouse, family member, friend, etc.) to read the interview questions and videotape their responses using the app. If unable to find an interview partner, participants can video record the interview themselves.

Patients and caregivers/observers will each be compensated with a \$50 Amazon gift certificate for their time.

If you are interested in participating in an interview, please contact Casimir study staff by email (**marys@casimirtrials.com**) or phone (**800-881-5657**).
